## Installing your new server

Great! You've just purchased a Unturned server subscription on ProRedLine. Once payment is completed, a new server will be installed on your account. The process is as follows:

### The Emails You Will Receive and the Installation Process

First, you will receive an email from the webshop informing you of the current status of your order. If payment has been completed, the order will begin processing. Your server will begin the installation process.

If you are a new customer, you will receive a second email notifying you that a new account has been created at <https://dashboard.proredline.com>. This email will include a password reset link to set up your first password. Make sure to remember this password. If you wish to set up MFA, please refer to the Server Dashboard Manual you received.

Once your server installation is complete, you will receive the final email notifying you that the server is ready for use. At this point, you can sign in to your account at <https://dashboard.proredline.com> and access your server dashboard.

For further information regarding the dashboard functionality, please refer to the **Server Dashboard Manual** you received.

### The specific options for your server

Once the server has been installed, you will need to configure it before it can run as expected. This configuration process will vary depending on the type of server you've purchased. Please follow the specific instructions provided in the server manual to ensure your server is properly set up and optimized for your needs.

#### Startup tab

On your server's dashboard, go to the "Startup" tab. Here, you will find several settings that you can configure according to your specific needs. Below is a list of options available for your Unturned server in the "Startup" tab:

1. STARTUP COMMAND and DOCKER IMAGE are read-only variables and cannot be modified.

Variables:

1. **SERVER NAME.** This is the name that will show up on the server list in Unturned.
2. **(OPTIONAL) SERVER PASSWORD.** This is the password required for player to join your server. This can be left blank to disable a server password.
3. **GSLT.** Here, you need to enter your personal Steam Auth Token. You can obtain this token by visiting [Steam's Game Server Management page](#), logging in, and creating a new token for ETS2. The App ID is **304930**. You can choose your own 'Memo.' Once done, click 'Create' and paste the generated token into the 'GSLT' field in your server's dashboard.

4. **AUTO UPDATE.** This checks for updates upon starting your Unturned server. We recommend leaving this option enabled.

Starting your server:

- Once you have configured all the settings, you can start the server by going to the **“Console”** tab and clicking **“Start”**.
- Wait a few moments for the server to boot. When you see the message: **Server Code: <number>**.
- Your server is fully booted and ready to be joined.

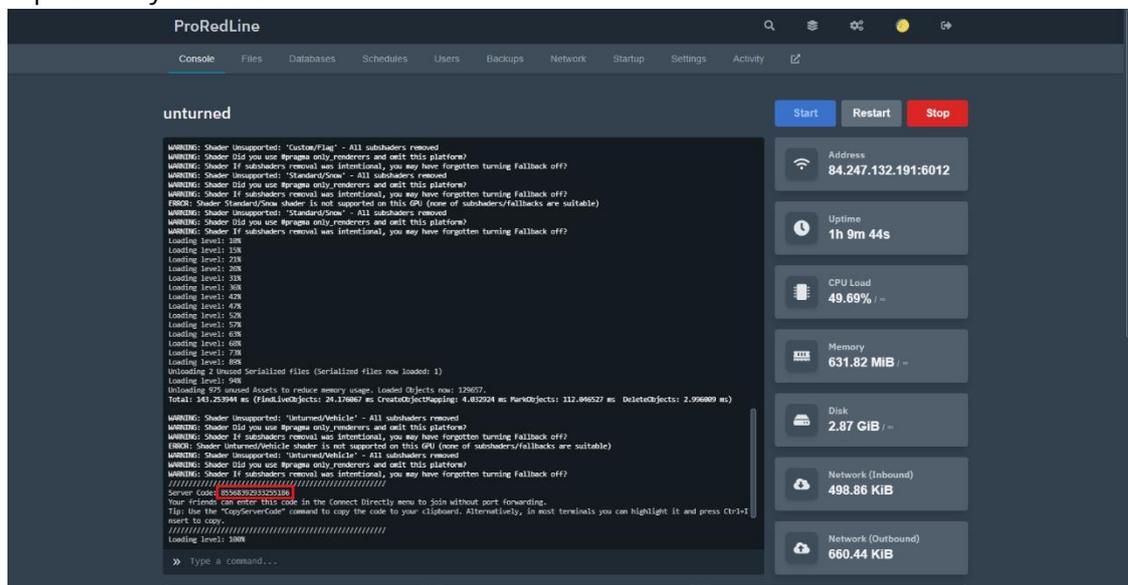

### Changing Configurations:

If you wish to change settings not listed in the **Variables** section, you can edit the server’s config file located at `/home/container/Servers/ProRedLineUnturned/Config.json`. However, note that any changes to the **Variables** options in the **“Startup”** tab will override the corresponding settings in the config file. We recommend only changing values in the config file that are not listed in the **Startup** tab.

### Joining your server within 24 hours

Joining your Unturned server is a bit different from most games for the first 24 hours. It’ll not be joinable using the multiplayer screen in Unturned. If 24 hours has passed, please skip to the next chapter of this manual.

1. Once your server has started, you can find your ‘Server Code’ in the console. This ID represents your server.

2. The number is your ID. Copy this number to your clipboard.
3. Next, we’re going to use this ID to connect to your server. On the home screen, click play > Connect Directly

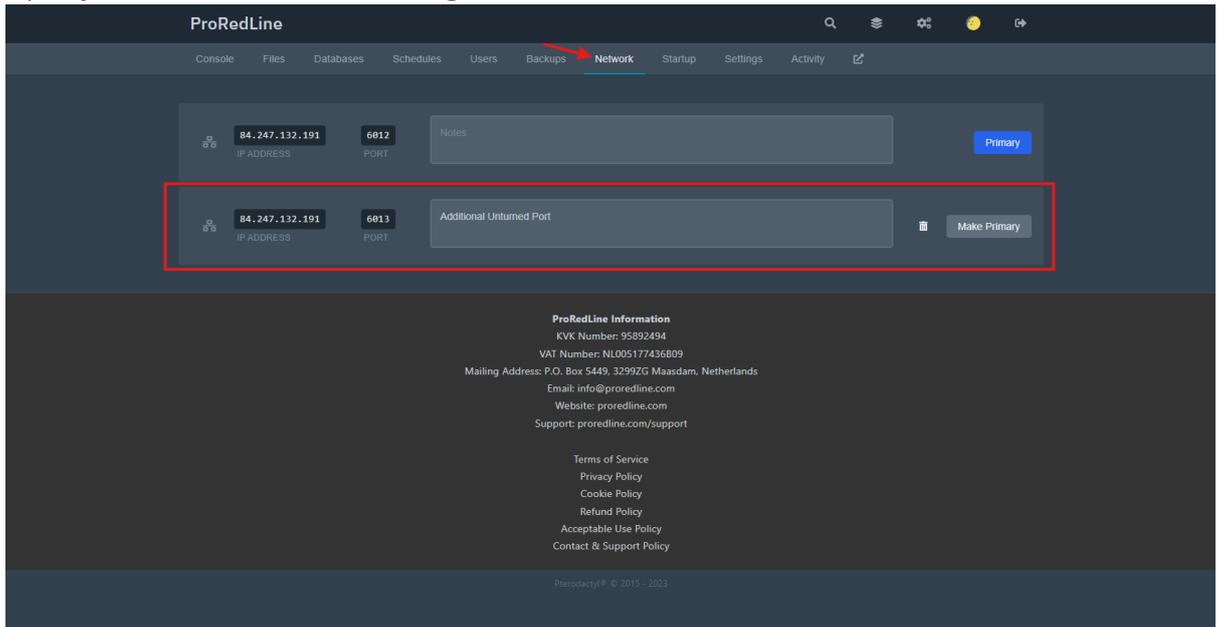

4. Enter your server ID into the "Host or Server Code" field, optionally enter your server's password and click "Connect".
5. You'll now join your Unturned server as normal.

### Joining your server after 24 hours

We at ProRedLine need to manually add a second "Port" to your server in order for your server to be joinable on the multiplayer tab within Unturned. First you need to check if this has been done. This can easily be checked on your server's dashboard. Please follow these steps:

1. Open your server's dashboard and go to the network tab.

2. If your second "Port" has been added, you'll see a second block below your primary network block. If this has not been done yet, you'll only see the primary block.

**It is important to not change anything on the network tab as it can break your server.**

Now you can join your server through the Multiplayer tab. Simply search your server's name in the server list and click join!

### Legal information for your server

When managing your Minecraft server, it's important to adhere to the following legal guidelines:

1. **Smartly Dressed Games's Usage Guidelines:**  
Please review and follow the official Smartly Dressed Games's Usage Guidelines to ensure your server complies with their policies. You can find the guidelines [here](#).
2. **ProRedLine's Terms of Service (ToS):**  
Ensure that your server is in compliance with ProRedLine's Terms of Service. You can read the ToS [here](#).
3. **ProRedLine's Acceptable Use Policy (AUP):**  
Your server must adhere to ProRedLine's Acceptable Use Policy. Please familiarize yourself with the AUP by reading it [here](#).

By following these guidelines, you can ensure that your server operates within the legal boundaries set by both Smartly Dressed Games and ProRedLine.

### Reinstall your server

If you need to reinstall your server, follow these steps:

1. **Go to the "Settings" Tab:** Navigate to the "Settings" tab in your server dashboard.
2. **Scroll Down:** Look for the option to reinstall your server.
3. **Click on "Reinstall Server":** This button will initiate the reinstallation process.

**Important Note:** Reinstalling your server will delete all of your current files and configurations. It will replace them with a fresh, clean installation. Make sure to back up any important data before proceeding with this action.

## Support for your server

If you have any questions or concerns regarding your server at ProRedLine, you can reach our support team by visiting [ProRedLine Support](#).

For questions specifically related to Minecraft, we recommend contacting Smartly Dressed Games's support directly through their [Help Center](#).
